

Appendix A3 – Maintenance Mechanic occupation changes

Changed:

- Format-from Hybrid to Competency-based
- RTI - Reduced number of courses and total instructional hours from 32 credits (625 hours) to 18 credits (270 hours). (The significant drop in hours is due to the original program format being based on a Certificate of Achievement that included general education courses. TMCC no longer offers the Certificate program so employers have opted to focus the RTI on specific occupational requirements and remove general education coursework)
- Wage was also changed from \$14 an hour to \$17, as industry is increasing their entry level wages. This also better aligns with current inflation costs.
